Stata

My output matches that of the Charness and Kuhn (2007) Table 3, with the exception of the error for `rel_w1_low` (I got .0274, the paper reports .026).

$$this = \frac{1}{3}$$

this is $\frac{1}{4}$

The code is essentially identical to exercise 4, with the exception of adding an option of `reg ..., robust cluster(wrk1id)` or `(wrk2id)`.
